

Coordinate System Manager

This standalone utility provides access to your coordinate system database (Current.csd). Use it to create coordinate systems or determine which coordinate systems, geoid models, and calibrated sites are available for use in your project.

Feature Definition Manager

This standalone utility allows you to create and manage a library of feature definitions that can be saved in a Feature Definition (.fxl) file.

Trimble GNSS Planning Online

This online utility allows you to plan and schedule a GPS project based on information indicating good and bad satellite coverage.

Convert to RINEX

This standalone utility converts Trimble GNSS measurement files in DAT, T00, T01, T02, RT17, RT27 or .cap format to RINEX version 2.10, 2.11 or 3.02 formats.
